RISKS FACTORS

GENERAL RISKS OF INVESTING IN A WHOLESALE FUND

- **Market Risk**

Market risk refers to the possibility that an investment will lose value because of a general decline in financial markets, due to economic, political and/or other factors, which will result in a decline in the fund's net asset value.

- **Manager's Risk**

This risk refers to the day-to-day management of the fund by the manager which will impact the performance of the fund. For example, investment decisions undertaken by the manager, as a result of an incorrect view of the market or any non-compliance with internal policies, investment mandate, the deed, relevant law or guidelines due to factors such as human error or weaknesses in operational process and systems, may adversely affect the performance of the fund.

- **Inflation Risk**

This is the risk that investors' investment in the fund may not grow or generate income at a rate that keeps pace with inflation. This would reduce investors' purchasing power even though the value of the investment in monetary terms has increased.

- **Performance Risk**

As a result of the risk elements, the returns from a fund are not guaranteed. The value of the fund's investment will vary when sold and an investment may be worth more or less than when purchased.

SPECIFIC RISKS ASSOCIATED TO THE FUND

- **Illiquidity Risk**

The investment to be made by the Fund would be generally illiquid. The eventual liquidity of all investment of the Fund will be dependent upon the success of the realisation strategy proposed for each investment which could adversely be affected by a variety of risk factors. The period of time required to liquidate the Fund's assets cannot be predicted with certainty.

- **Stock Specific Risk**

Prices of a particular stock may fluctuate in response to the circumstances affecting individual companies such as adverse financial performance, news of a possible merger or loss of key personnel of a company. Any adverse price movements of such stocks will adversely affect the Fund's NAV.

- **Equity-related Securities Risk**

The Fund invests in equity-related securities such as rights and warrants, where price movement is dependent on the price movement of the underlying equities. The risk is generally higher than their underlying equities as these equity related securities are leveraged form of investment. The price of equity-related securities generally fluctuates more than the underlying equities and consequently may affect the volatility of the Fund's NAV.

- **Concentration risk**

Concentration risk is the probability of loss arising from lack of diversification, investing with a single issuer. The strength of the issuer may be affected due to changes of financial performance, news of a possible merger or loss of key personnel of the issuer.

- **Country Risk**

Investments of the Fund in any foreign countries may be affected by changes in the economic and political climate, restriction on currency repatriation or other developments in the law or regulations of the countries in which the Fund invests in. For example, the deteriorating economic condition of the countries may adversely affect the value of the investments undertaken by the Fund in those affected countries. This in turn may cause the NAV or prices of Units to fall.

- **Currency Risk**

As the base currency of the Fund is in Malaysian Ringgit, any fluctuation in the exchange rate between the base currency and the currencies in which the investments are denominated may have an impact on the value of these investments. Investors should be aware that if the currencies in which the investments are denominated depreciate against the base currency, this will have an adverse effect on the NAV of the Fund in the base currency and vice-versa. Investors should note that any gains or losses arising from the fluctuation in the exchange rate may further increase or decrease the returns of the investment.

- **Credit and default risk**

Credit risk relates to the creditworthiness of the issuers of the debt instruments and its expected ability to make timely payment of interest and/or principal. Any adverse situations faced by the issuer may impact the value as well as liquidity of the debt instrument. Default risk relates to the risk than an issuer of a debt instrument either defaulting on payments or failing to make payments in a timely manner which will in turn adversely affect the value of the debt instruments. This could adversely affect the value of the Fund.

- **Interest Rate Risk**

Interest rate risk refers to the impact of interest rate changes on the valuation of debt instruments whenever is applicable. When interest rates rise, debt instruments prices generally decline and this may lower the market value of the Fund's investment in debt instruments. The reverse may apply when interest rates fall.

- **Counterparty risk**

The Fund's placements of deposits and/or investments in money market instruments with Financial Institutions are subject to the risk of the counterparty. Counterparty risk also refers to the possibility that the counterparty being unable to make timely payments of interest and/or principal payment on the maturity date. This may then lead to a default in the payment and/or interest and ultimately, affect the NAV per Unit of the Fund.

The abovementioned risks which you should consider before investing into a wholesale fund should not be considered to be an exhaustive list.

You should be aware that investments in the Fund may be exposed to other risks of an exceptional nature from time to time.

CALCULATION OF UNIT PRICES

VALUATION POINT

Valuation point refers to the time(s) on a Business Day as may be decided by the Manager wherein the NAV of the Fund is calculated. The Manager, at its discretion, may consider additional valuation point(s) for the Fund when there is a material market movement within the day (more than 5% of the last valuation point). The Fund will be valued at the end of the Business Day.

If and when the Fund invests in a foreign market, the valuation of the Fund may be carried by 5.00p.m (or such other time as may be permitted by the relevant authorities from time to time) on the following Business Day (T+1 Day).

This is due to certain foreign markets in which the Fund may invest in have yet to close due to the different time zones. As such, the daily NAV of the Fund will be determined on T+1 Day and will be published on T+2.

SINGLE PRICING POLICY

We adopt the single pricing policy to price the Units in relation to investment and redemption of Units. This means that the selling of Units by the Manager (i.e. when you purchase Units and invest in the Fund) and repurchase of Units by the Manager (i.e. when you redeem your Units and liquidate your investment) will be carried out at NAV per Unit (the actual value of the Unit). The entry or exit fee (if any) would be computed separately based on your net investment or redemption amount. The single price for investment and redemption of Units shall be the daily NAV per Unit at the next valuation point after the Manager receives the investment or redemption application (i.e. forward pricing)

HOW IS THE NAV (ACTUAL VALUE) PER UNIT CALCULATED?

The Manager will calculate the NAV of the Fund at the end of valuation point. The NAV is defines as the total value of the Fund's investment, assets and properties less any liabilities or provisions. Where applicable, investment

income, interest payable, fees and other liabilities will be accrued daily in arriving at the NAV of the Fund. The NAV per Unit is then determined by dividing the NAV of the Fund by the number of Units in circulation at the valuation point rounded nearest to four (4) decimal places or as agreed between Manager and Trustee.

NAV PER UNIT

The NAV per Unit is then determined by dividing the NAV of the Fund by the number of Units in circulation at the valuation point.

Computation of Net Investment Amount and Units Entitlement

A. For investors who make a lump sum payment inclusive of fees and any relevant taxes which may be imposed by the government from time to time.

The net investment amount (excluding fees and taxes) is determined by dividing the lump sum payment (excluding bank charges) with a Charge Factor (Charge Factor = 100% + Entry Fee in %).

The number of Units invested is determined by dividing the net investment amount (excluding fee and taxes), with the NAV per Unit at the next valuation point after the Manager receives the investment application and rounded up to two (2) decimal places.

B. For investors who prefer an even (rounded) net investment amount.

The number of Units invested is determined by dividing the net investment amount (excluding fee and taxes), with the NAV per Unit at the next valuation point after the Manager receives the investment application and rounded up to two (2) decimal places.

CALCULATION OF REDEMPTION VALUE

The Redemption value is the number of Units to be liquidated multiplied by the NAV per Unit at the next valuation point, after the Manager receives the Redemption request.
